

# 24<sup>th</sup> FERCAP International Conference 2024

## Maximizing Benefits through Responsible Conduct of Research

**Naheeda Hamza**

PhD Fellow, Institute of Health and Society  
University of Oslo, Norway

Tutor, Centre for Ethics  
Yenepoya (Deemed to be University), India

# FROSiON

## Fostering Responsible Open Science into One Health in India

Presenter: Naheeda Hamza

Co-authors: Rosemarie Bernabe,  
Alina Coman, Uma Kulkarni

**Exploring Open Science and  
One Health: The ROSIE  
project's perspective**

# Overview

1 Background

2 Scoping review of the challenges and opportunities in One Health

3 Methodology

4 Results and conclusion

# Background

- One Health (OH) is a collaborative, and multisectoral concept implemented in public health [1]
- Lack of aiding policies & institutional capacities; difficult to evaluate the impact of OH in India [2]
- Incorporating Open Science into OH would form a solid basis for ensuring research integrity in OH research [3]

# Objectives

Identify ELSI in  
OH- Scoping  
review

Explore opportunities &  
inequities  
(Mixed methods)

Develop a framework  
(Normative theory)

Study population  
(One Health  
researchers)

Epidemiologists

Veterinarians

Ecologists

Policymakers

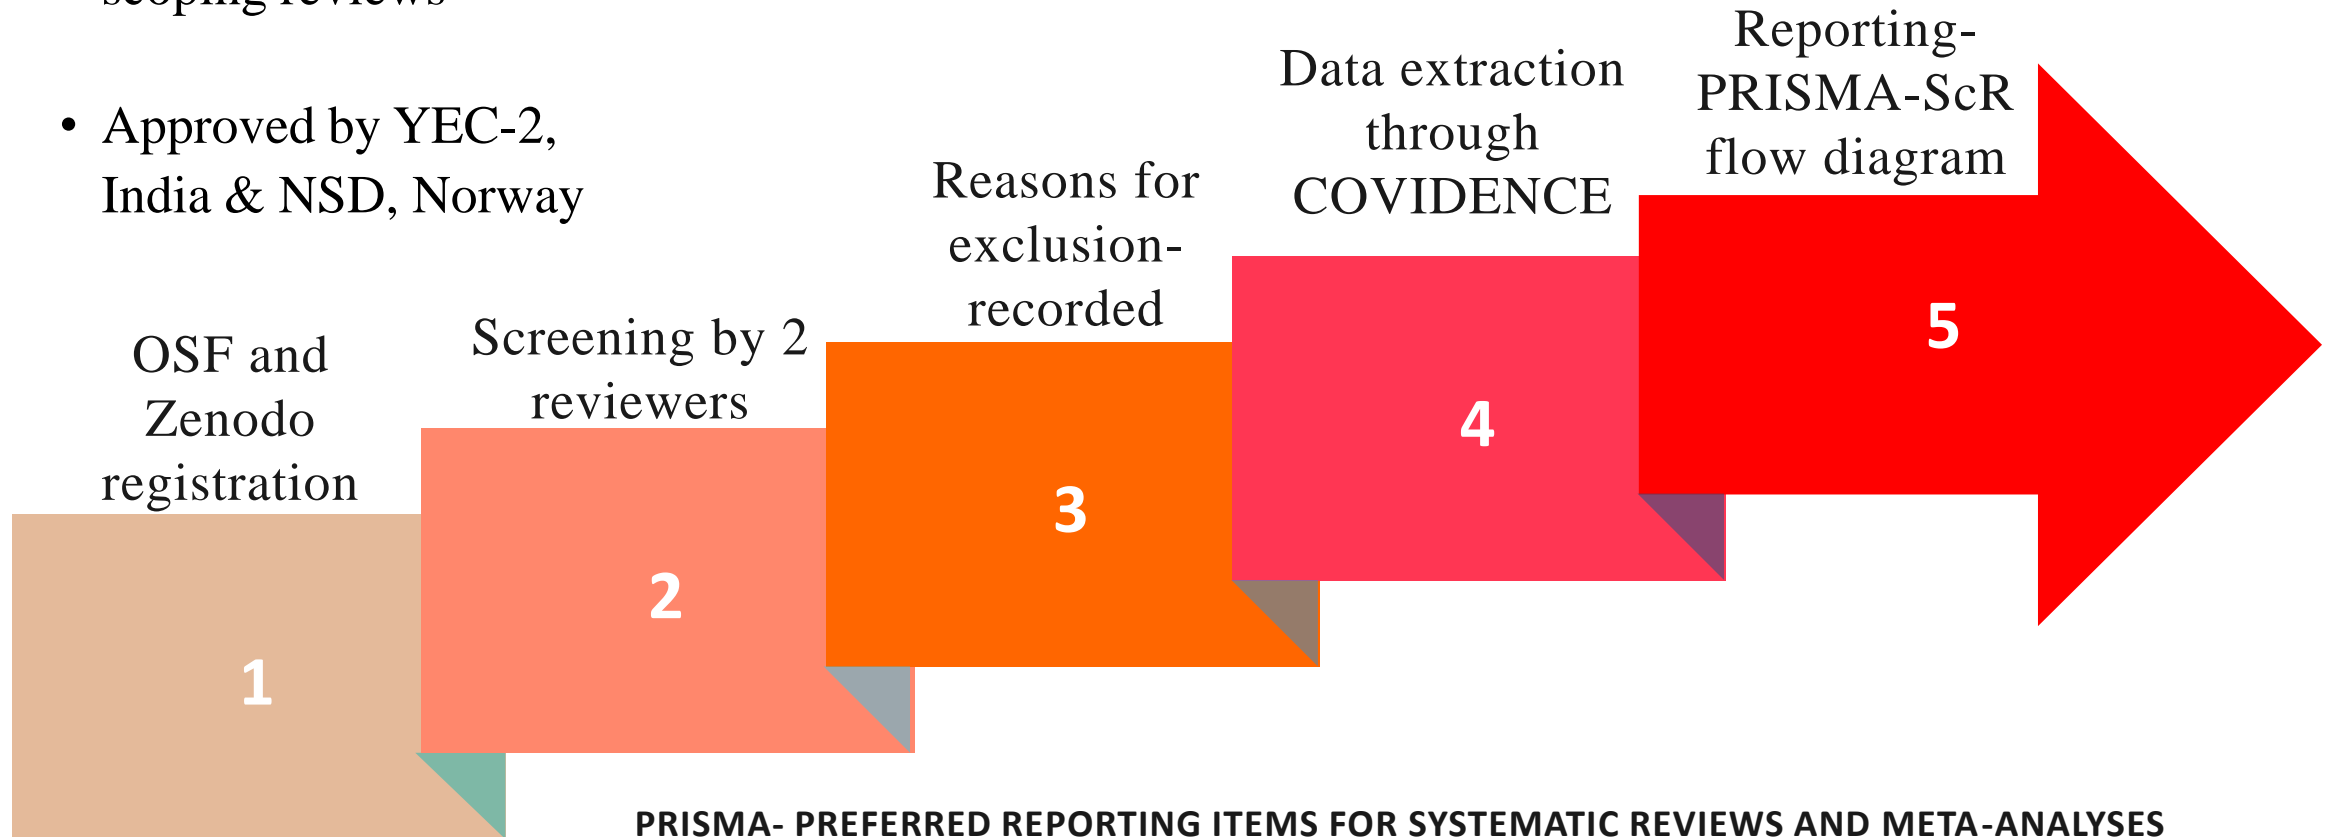

Citizen  
Scientists

# SCOPING REVIEW- STUDY TOOLS & TECHNIQUE

- JBI (Joanna Briggs Institute) template for scoping reviews
- Approved by YEC-2, India & NSD, Norway

PRISMA- PREFERRED REPORTING ITEMS FOR SYSTEMATIC REVIEWS AND META-ANALYSES  
EXTENSION FOR SCOPING REVIEWS

Windows taskbar: FROCO- Fostering Responsible O x +

NVIVO Phase 1- Scoping review.nvp

# Results contd..

Challenges & no. of papers

Categories & no. of papers

# Discussion

## A Institutional level

- limited infrastructure, funds [3-5]
- lack of zoonotic disease knowledge [4]
- Inadequate training, **unclear reporting** systems [5]
- **political conflicts** between different sectors [5]
- limited engagement from stakeholders from other disciplines [2]

## B National level

### Challenges in collaboration

*Cultural challenges, limited infrastructure, limited involvement of non-scientific community, **lack of inter-ministerial collaboration**, hierarchical barriers [6-9]  
limited focus on Vets [10]*

### Challenges in data sharing

*No official strategies to facilitate data sharing, lack of tools to capture field data, **confidentiality issues**, **community health worker-related challenges** [2,3,7,11]*

### Challenges in Open Science

*Increasing article processing charges, Lack of funds, **publication inequality**, limited awareness about Citizen Science, **lack of funds for community-driven projects** [12]*

# Scope for improvement

## One Health

- One Health committees [13]
- Frameworks & policies
- Assessment tools
- Context-specific cross sectoral collaborations [2]

## Citizen Science

Techniques to improve Citizen Science [12]  
Guideline for Citizen Science [14]  
Digitalised participatory data generation  
Data visualization to make results understandable [15]

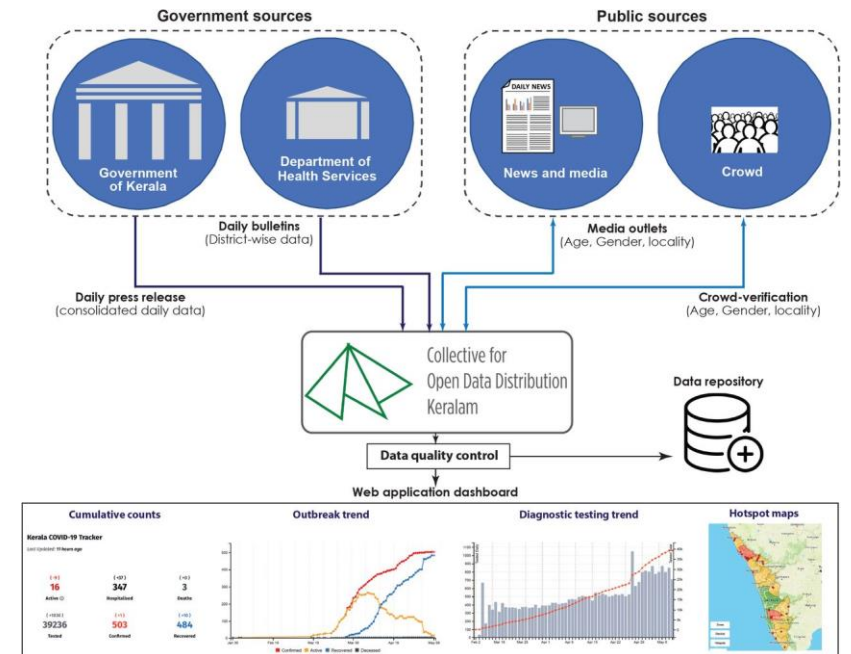

## Open Science

Open Science programs  
Joint education for professionals  
Need for equitable participation of stakeholders [12]

# Enablers

- One Health centric guidelines- developed for each countries [7]
- Open Science Framework through 5<sup>th</sup> STI policy draft) by DST [12, 14]

## Data visualization dashboard

<https://www.medrxiv.org/content/10.1101/2020.05.13.20092510v2.full>

# Conclusion

- Lack of inter-ministerial collaboration
- Hierarchical barriers
- Confidentiality issues
- limited awareness about Citizen Science

## Limitations

- The challenges identified may be a reflection of the current nascent stage of One Health in India.
- The findings may not fully capture the potential challenges that may arise in the future as the field evolves.
